Types of Compensation Received by Physician Assistants in Endocrinology from their Primary Employers in 2007

Methodology

As part of the 2007 AAPA Physician Assistant Census, respondents were asked to report the amount of money they expected to receive in 2007 for the following ten compensations types:

1. Base pay (salary or hourly wage)
2. Surgical assisting fees
3. Overtime pay
4. Shift differential
5. Administrative pay
6. Pay for on-call availability
7. Pay for on-call services/events
8. Bonus not based on productivity/performance
9. Bonus based on productivity/performance of practice
10. Bonus based on your own productivity/performance

We calculated the proportion of total income represented by base pay (salary or hourly wage) received by each respondent. This calculation involved dividing the amount of base pay received by the sum of all compensation types for each respondent.

For each of the other compensation types for which data were collected, we computed the number and percentage of respondents who received various amounts of each. Specifically, we classified this information in the following categories:

- Do not receive
- Receive less than \$1,000
- Receive between \$1,000 and \$5,000
- Receive between \$5,000 and \$10,000
- Receive more than \$10,000

Results

In the tables that follow, we report the mean, standard deviation, and percentile distribution of the proportion of total income represented by base pay. We also report the number and percent distribution of respondents who received various amounts of each specific compensation type. All statistics are reported by years of experience as a PA.
