 Washington, DC 20515

The Honorable Hakeem Jeffries
 House Minority Leader
 2433 Rayburn House Office Building
 Washington, DC 20515

The Honorable Mitch McConnell
 Senate Minority Leader
 317 Russell Senate Office Building
 Washington, DC 20515

RE: The Reentry Act (H.R.2400/S.1165) and Due Process Continuity of Care Act (H.R.3074/S.971)

Dear Speaker Johnson, Minority Leader Jeffries, Majority Leader Schumer, and Minority Leader McConnell:

The 66 undersigned organizations urge you to pass the *Reentry Act (H.R.2400/S.1165)* and *Due Process Continuity of Care Act (H.R.3074/S.971)* by the end of the session.

Together, our organizations represent those on the front lines of the overdose crisis—Americans personally affected and who have lost loved ones, health care and behavioral health providers, law enforcement professionals and first responders, Veterans, faith-based leaders, recovery and harm reduction specialists, health and social justice advocates, payers, and public health experts. We have come together to ask you to take immediate action to address the overdose crisis by passing the bipartisan *Reentry Act (H.R.2400/S.1165)* and the *Due Process Continuity of Care Act (H.R.3074/S.971)*.

The *Reentry Act* and *Due Process Continuity of Care Act* will help integrate substance use treatment into carceral settings, reduce recidivism, and prevent needless overdose deaths.

The *Reentry Act* would allow Medicaid coverage to start 30 days before release and the *Due Process Continuity of Care Act* would allow Medicaid coverage while an individual is awaiting trial. Both bills have bipartisan support in the current Congress, with each bill garnering nearly 100 co-sponsors. During a deadly overdose crisis, these bills are commonsense solutions to increase the availability of substance use disorder treatment for incarcerated individuals, decrease overdose deaths, and better protect public health and safety.

Fatal drug overdoses are the fastest growing cause of death amongst incarcerated individuals.¹ Additionally, inmates re-entering society are the most vulnerable population to experience a fatal overdose – individuals reentering society post incarceration are 129 times likelier to die of a drug overdose than the general population during the two weeks following their release.²

Increasing access to medications for opioid use disorder (MOUD) saves lives and has been associated with an 80% reduction in overdose mortality risk for the first month post-release.³ According to mathematical modeling from the Office of National Drug Control Policy, the consistent provision of MOUD while incarcerated and immediately upon release, could prevent upwards of 11,600 to 15,900 overdose deaths per year.⁴ In addition to preventing overdose deaths, individuals who received MOUD while incarcerated had an estimated 32% lower risk of recidivism than those who did not.⁵

By allowing Medicaid coverage during the critical windows when an individual is returning to the community from incarceration and the period while they are awaiting trial, the *Reentry Act* and *Due Process Continuity of Care Act* represent two of the strongest opportunities for the 118th Congress to increase public safety and improve public health outcomes nationwide. We urge you to pass these pieces of legislation by the end of the session to save lives and to extend the hope of healing to communities across the country. With more than 100,000 overdose deaths occurring each year, the time to expand access to safe and effective treatment is now.
